- 3.2.2 Principle of conservation of linear momentum. ✓ *Die beginsel van behoud van lineêre momentum.*

The total linear momentum of an isolated system ✓ remains constant ✓ / is conserved (in both magnitude and direction).

Die totale lineêre momentum in 'n geïsoleerde sisteem bly konstant / bly behoue in grootte en rigting.

OR/OF

In an isolated system, the total linear momentum before a collision is equal to the total linear momentum after the collision in both magnitude and direction.

In 'n geïsoleerde sisteem is die totale lineêre momentum voor die botsing gelyk aan die totale lineêre momentum na die botsing in beide grootte en rigting.

- 3.3.1 The net (resultant) force acting on an object is equal to the rate of change of its momentum in the direction of the net (resultant) force. ✓✓

Die netto (resulterende) krag wat op 'n voorwerp inwerk is gelyk aan die tempo van verandering in momentum, in die rigting van die netto (resulterende) krag.

(2)

- 3.5 During collision the air bags/crumple zone/padded dash boards increase the time taken to reach (the hard surface of) the dash board/car engine/steering wheel , ✓ thus decreases the net force/force of impact and the extent of injuries. ✓

Gedurende botsings sal die lugsakke/ krummelsones en opgestopte paneelborde die tyd verleng voor die harde oppervlakte van die paneelbord/stuurwiel/enjin getref word, en verlaag dus die netto krag/krag van impak en die graad van beserings.
